At ITUS, we have an International surveillance capability that employs skilled and experienced operators with many years of expertise.

### We have 3 levels of surveillance:

1. Static – One person in a car/van recording access and people to an address.
2. Travelling – We have teams Who can follow people in cars, on public transport and continues on flights. Their teams vary from 3 to 7 people on each case.
3. 3. Counter – Our top level team is experienced in surveillance on individuals and countries that list counter-surveillance teams to protect them.

It can help prove or disprove cases as long as appropriate investigative practices following the law and good video documentation has been carried out. Our experienced investigators regularly use video surveillance equipment to gather evidence. We use advanced covert camera and video recorder equipment, allowing good quality images to be obtained for surveillance operations.

Covert Surveillance is legal and detectives use a number of techniques to ensure the work is professional, discreet and confidential. Once the Surveillance task is complete our operatives will gather the photographic/video evidence obtained during the Surveillance operation and produce a professional report which will then be sent to the client.

To seek the reassurance of the truth, you need to be in full possession of the facts in order to make an informed decision. This can apply to both professional and private lives.

There are a variety of elements that need to be present for the completion of successful surveillance work. Most importantly, at ITUS we have experienced and trained professionals with the necessary skills to overcome the various problems that can arise during a surveillance operation.
